

FTP configuration

For creating ftp user

```
useradd ftp_username
```

For setting password

```
passwd ftp_username
```

```
apt update
```

```
apt install vsftpd
```

Then go to

```
Cd /etc/
```

Inside /etc make a directory as below

```
mkdir vsftpd
```

Go inside the vsftpd directory

```
Cd /vsftpd/
```

Then make directory

```
mkdir user_config_dir
```

Inside user config directory make files corresponding to each ftp user and give the document root of the ftp user inside the file

For example create a file ftpuser1

```
touch ftpuser1
```

Inside that file give the document root

```
local_root=/var/www/html
```

Save the file

If there have more than one ftp user the create files corresponding to each user and give the document root inside the file

To add the ftp user to the userlist

```
echo "ftp_username" |tee -a /etc/vsftpd.user_list
```

Then goto vsftpd.conf file add the below codes inside it

```
nano /etc/vsftpd.conf
```

```
write_enable=YES
```

```
user_sub_token=$USER
```

```
user_config_dir=/etc/vsftpd/user_config_dir/
```

```
userlist_deny=NO
```

```
pasv_min_port=40000
```

```
pasv_max_port=50000
```

Save the vsftpd.conf file and restart the vsftpd.services

Open the ports 21, 40000-50000

Change the permissions and ownership of document root accordingly

-----*****-----

To add the ftp user to the ftp group (if required)

```
usermod -a -G ftp aneesh
```

Here its add the ftp user aneesh to the FTP group

```
to check user added to group

root@ip-192-168-97-167:/home# cat /etc/group |grep www-data

-----

www-data:x:33:

cat /etc/group |grep www-data(group name)

add the user to the group

-----

sudo usermod -aG www-data username

check

-----

cat /etc/group |grep www-datacheck permission inside the directory-----give 775 permission to allalso change the 777 to default file

chmod -R 775 directoryname

-----

eg

chmod -R 777 img chmod -R 777 cache/

-----
```
